

We can help Care for our Environment by Supporting Eco-Friendly REITs

Introducing an investment strategy to help our environment by conserving energy and creating buildings with eco-friendly materials and methods of construction

Detroit, MI – A lot of people are concerned about the impact of real estate development on our planet. Though investing in real estate has been profitable; many would like to invest in our environment and help to preserve the planet. Earl E. Bird, III, REITs expert, was recently interviewed and this subject came up. Earl said, “New construction will always be necessary and there are real estate management groups who specialize in eco-friendly and green construction.”

Earl talked about the new website, an online brokerage for REIT investors, the REITbuyer.com. “This site is a great resource for researching different management companies, including the ones who specialize in the green methods of building. This new method of construction produces attractive buildings that are more sustainable, using less power and water, meaning they cost less to manage and earn a better profit.”

Earl believes all industries should be making an effort to conserve energy and all of our scarce resources. Since energy conservation is a growing trend, it makes sense to focus our investments in the greener side of the market.

“These days, companies are bragging about their construction methods and maintenance plans being environmentally friendly,” said Earl. “It makes good sense to invest in REITs that support eco-friendly construction.”

REITbuyer.com is an online brokerage information site specializing In REITs and Real Estate Mutual Funds – The World’s first and only site dedicated to REITs Real Estate Mutual Funds. This is a place for the small investor to own a piece of world class real estate. The above press release is not the opinion of SaveDaily. Any advice given is option of writer.
